

Follow-up report 11

16/04/2021

The event is ongoing. Weekly follow-up reports will be submitted.

Sender	Country/territory	Report ID
Delegate of United States of America	United States of America	FUR_149533
Event status	Self-declaration	
On-going	No	

General information

Country or zone - Country	Disease - SARS-CoV-2 in animals (Inf. with)	Started on - 22/10/2020
Animal type - Terrestrial	Confirmed on - 13/04/2021	Causal agent - SARS-CoV-2
Disease category - Emerging	Reported on - 16/04/2021	Reason - Emerging disease

Disease impact

Outbreak morbidity - 2.0	Outbreak mortality - 1.0
Zoonotic potential - Yes	Zoonotic potential description - Zoonotic potential under investigation

Epidemiology

Source of the event or origin of the infection - Suspected human transmission

Epidemiological comments--16 April 2021 Update:

Pennsylvania (PA): A lion at a zoo was confirmed positive for SARS-CoV-2 at the National Veterinary Services Laboratories (NVSL) based upon molecular testing (PCR and sequencing).

The affected lion exhibited intermittent diarrhea and dry cough. A second lion, who also had intermittent diarrhea and dry cough, was sampled and is presumed positive for SARS-CoV-2. It is likely that the SARS-CoV-2 virus was transmitted to the lions by an infected human. Both lions are progressively recovering.

The affected animals remain sequestered in the zoo's Big Cat building and never have direct contact with the public. Increased biosecurity measures have also been implemented.

Tennessee (TN): Virus neutralizing antibodies for SARS-CoV-2 have been detected in samples from two additional cats in Knox County, TN who shared the same household with the SARS-CoV-2 confirmed positive cat.

Virus neutralizing antibodies in the absence of other positive test results have been detected in the following animals (listed by state):

- 1 dog (ID)
- 1 dog (MT)
- 2 cats (TN)
- 4 cats (TX)
- 11 dogs (TX)

As of 16 April 2021, total number of animals with detections of virus neutralizing antibody in the absence of other positive test results: 82

There is a single SARS-CoV-2 event occurrence in the United States of America, however, for WAHIS technical reasons, any new outbreaks in the country will be reported in this new event and not in the one first reported in April 2020.

For more details about SARS-CoV-2 testing of animals in the United States, see:
<https://www.aphis.usda.gov/aphis/dashboards/tableau/sars-dashboards>

Control measures at event level

Domestic control measures

Applied

- Quarantine
- Disinfection

Wild control measures

Applied

- Quarantine
- Disinfection

Diagnostic

Clinical signs - Yes

Method of diagnostic - Diagnostic test
