General information

Country or zone - Country	Disease - SARS-CoV-2 in animals (Inf. with)	Started on - 17/01/2022
Animal type - Terrestrial	Confirmed on - 18/01/2022	Causal agent - SARS-CoV-2
Disease category - Emerging	Reported on - 21/01/2022	Reason - Emerging disease

Disease impact

Outbreak morbidity - 0.86	Outbreak mortality - 0.0
Zoonotic potential - Yes	Zoonotic potential description - Based on the current epidemiological findings, there is suspicion of animal to human transmission.

Epidemiology

Source of the event or origin of the infection - Unknown or inconclusive

Epidemiological comments SARS-CoV-2 was detected in multiple hamsters and/or environmental swabs from a pet shop and its warehouse. The samples were collected because a staff at the petshop (who had not been to the warehouse) was tested positive for COVID-19 and was found to be infected with a Delta strain of virus that has never been detected in Hong Kong.

All animals (small mammals – hamsters, mice, guinea pigs, chinchillas, rabbits) in the pet shop and warehouse were humanely dispatched to minimize the potential risks of COVID-19 infection and safeguard public safety. Hamsters from all pet shops in Hong Kong will also be taken for testing and humane dispatch and the other animals of these pet shops will also undergo testing. Business is suspended until there is satisfactory results.

Import of small mammals has also been suspended. As the hamsters from the index pet shop were imported from Europe with the last two consignments arriving on 22/12/21 and 7/1/22, members of public are also urged to surrender their hamsters purchased from local pet shops after 22/12/21 to the government for testing and humane dispatch.

Further testing and epidemiological investigation is continuing. Members of public and the veterinary community will be kept abreast of the development via government announcements.

Control measures at event level

Domestic control measures

Wild control measures

Applied

- Official destruction of animal products
- Movement control inside the country
- Screening
- Surveillance outside containment and or the protection zone
- Traceability
- Disinfection
- Stamping out

Diagnostic

Clinical signs - No

Method of diagnostic - Diagnostic test

Test name	Category	Test type	Laboratory	Species sampled	Outbreaks	Tested from	Tested until	Result
Real-time reverse transcription polymerase chain reaction (rRT-PCR)	Nucleic acid detection	Laboratory Test	Tai Lung Veterinary Laboratory, Agriculture Fisheries and Conservation Department National Laboratory	Cricetidae (unidentified)	2	19/01/2022	20/01/2022	Positive
Real-time reverse transcription polymerase chain reaction (rRT-PCR)	Nucleic acid detection	Laboratory Test	School of Public Health, The University of Hong Kong Local Laboratory	Cricetidae (unidentified)	2	18/01/2022	20/01/2022	Positive

Location - Causeway bay

Description of the affected populationA staff of this pet shop was diagnosed with COVID-19 on 17/1/22. Subsequently, samples from 50 hamsters were collected for SARS-CoV-2 testing and the virus was detected in oral and faecal samples from seven hamsters with no observable clinical signs in this pet shop, other small mammals in the pet shop including rabbits and chinchillas were tested to be negative. To minimize the potential risks of COVID-19 infection and safeguard public safety, all 97 animals in the shop were humanely dispatched on 18/1/22.

Description of the affected population This warehouse stores small mammals and supplies to 35 pet shops selling hamsters in Hong Kong including the pet shop in causeway bay which a staff had been diagnosed with COVID-19. Samples from 79 hamsters were collected and oral sample from one hamster in the warehouse was tested SARS-COV-2 positive, samples from other small mammals including mice, rabbits and guinea pigs were tested negative. Among the 863 hamsters in the warehouse, four were found dead and two were found to be weak, others with no observable clinical signs. It is uncertain whether this has any relation to the virus.

To minimize the potential risks of COVID-19 infection and safeguard public safety, all 1116 animals in the warehouse were humanely dispatched.
