Epidemiological comments The dog was placed under quarantine on 26 February 2020 after its owner was hospitalised due to COVID-19 infection. Following veterinary examination nasal, oral, rectal swabs as well as faeces were taken after the dog's admission to the quarantine facility. Nasal and oral samples tested positive for SARS-CoV-2. The dog has not exhibited any specific clinical signs. Follow up nasal, oral and rectal swab samples and faeces were subsequently taken on 28th February and 2nd, 5th, 9th, 12th and 13th March 2020. Both oral and nasal samples taken on 28th February 2020 tested positive. The nasal samples taken on 2nd, 5th and 9th March continued to test positive. All samples taken on 12 and 13 March tested negative. No clinical sign was detected during the quarantine period. The animal was returned to the owner after completion of quarantine and consecutive negative test results. Risk management measures are in place for this case, including cleansing and disinfection of the premises, and proper personal hygiene and protection. Mammalian pets from households with confirmed human cases of COVID-19 will be placed under quarantine and veterinary surveillance for 14 days. Samples will be collected for testing of SARS-CoV-2 as appropriate.
