General information

Country or zone - Country Disease - SARS-CoV-2 in animals (Inf. Started on - 27/03/2020

with)

Animal type - Terrestrial Confirmed on - 04/04/2020 Causal agent - SARS-CoV-2

Disease category - Emerging Reported on - 30/10/2020 Reason - Emerging disease

Disease impact

Outbreak morbidity - 2.0 Outbreak mortality - 1.0

Zoonotic potential - Yes Zoonotic potential description - Zoonotic potential currently

unknown

Epidemiology

Source of the event or origin of the infection - Suspected human transmission

Epidemiological comments30 Oct 2020 Update-- Pennsylvania (PA): A domestic cat from a known positive COVID-19 household was confirmed positive for SARS-CoV-2 at the National Veterinary Services Laboratories based upon molecular testing (PCR and sequencing). The affected cat, which had a history of a gastrointestinal issue, exhibited mild to moderate respiratory clinical signs, including increased respiratory effort and crackles and wheezes heard on auscultation. The animal showed initial improvement on antibiotic and steroid therapy, but was eventually euthanized when its condition worsened. A respiratory swab sample taken from the cat, which first tested positive for SARS-CoV-2, also tested negative by feline respiratory panel. Additional medical workup is underway to determine what other factors may have contributed to the animal's decline. Texas (TX): A domestic dog from a known positive COVID-19 household was confirmed positive for SARS-CoV-2 at the National Veterinary Services Laboratories based upon molecular testing (PCR and sequencing). The affected dog showed clinical signs of diarrhea and lethargy. One additional dog residing in the same household has remained asymptomatic and tested negative for SARS-CoV-2 by PCR. Samples for this case were collected as part of planned and targeted active surveillance of a specific animal, with known or suspected exposures to a person with COVID-19 or other exposure to SARS-CoV-2, to better understand risk factors for SARS-CoV-2 transmission. Virus neutralizing antibodies in the absence of other positive test results have been detected in the following animals (listed by state): 1.4 dogs and 2 cats from three households (TX)** As of 30 Oct 2020, total number of animals with detections of virus neutralizing antibody in the absence of other positive test results:50 **Samples collected as part of planned and targeted active surveillance of specific animals, with known or suspected exposures to a person with COVID-19 or other exposure to SARS-CoV-2, to better understand risk factors for SARS-CoV-2 transmission.

Control measures at event level

Domestic control measures

Applied

- Quarantine
- Disinfection

Wild control measures

Applied

- Disinfection
- Quarantine

Diagnostic

Clinical signs - No

Method of diagnostic - Diagnostic test
